Java

```java
class Solution {
    public int[] findBuildings(int[] heights) {

    }
}
```

JavaScript

```javascript
/**
 * @param {number[]} heights
 * @return {number[]}
 */
var findBuildings = function(heights) {

};
```

TypeScript

```typescript
function findBuildings(heights: number[]): number[] {

};
```

C++

```cpp
class Solution {
public:
```

```cpp
    vector<int> findBuildings(vector<int>& heights) {

    }
};
```

C#

```csharp
public class Solution {
    public int[] FindBuildings(int[] heights) {

    }
}
```
